

How to redirect visitors to HTTPS?

In case you set a valid certificate for a domain name, we recommend that visitors redirect an unsafe `http://` address to secure `https://`.

You can easily redirect the redirection by modifying the `.htaccess` file in your `document_root` folder for that domain name.

Use the following rows in this example to redirect all users of a domain name from insecure (`http://`) URLs to secure (`https://`) URLs.

Replace the `example.com` domain name with your domain name.

```
RewriteEngine On
RewriteCond %{HTTPS} off
RewriteRule (.*) https://example.com/$1 [R=301,L]
```
