Using the Redirect tool in the cPanel

This tutorial will how you how to use the **Redirects** tool which will allow you to redirect your domain names.

- 301 or 302 Redirect
- Url to Redirect
- Destination URL
- WWW Redirect options
- Wild Card Redirect

1. Login to your cPanel account.
2. Click the **Domains** tab, near the top of the page.

301 OR 302 REDIRECT

From the **add redirect** menu, you will need to choose which type of redirect to use.

- **Permanent 301:** A 301 redirect will update the visitors bookmarks and direct search engines to the new site.
- **Temporary 302:** A 302 redirect will redirect the visitor or search engine, but will not update the bookmark and the search engine will continue to index to the original page.

URL TO REDIRECT

1. Choose your domain name you would like to redirect, using the drop-down menu.
2. If you would like to redirect a single page or directory; you can use the text field following the drop-down menu to enter the name of the folder or file.

DESTINATION URL

Enter the full URL of the page you will be redirecting to in the **"redirects to ->"** text field.
Note: You need to enter the protocol as well, e.g. http://, https:// or ftp://

WWW REDIRECT OPTIONS

Select if you will be redirecting **www.** or not.

- **Only redirect with www. –** This option will only redirect visitors that use www. as part of the URL
- **Redirect with or without www. –** This option will redirect all visitors.
- **Do Not Redirect www. –** This option will not redirect visitors that use www. as part of the URL
- **Wild Card Redirect –** Click the **"Wild Card Redirect'** if you would like to redirect to the same file on the new destination.

Click the **"Add"** button to create the redirect.
