How do I change the number of connections to a mail server?

If multiple mailboxes are used by using multiple parallel mail clients running an IP address, some clients may not be able to connect to the server.

FOR THUNDERBIRD:

In this case, under **Tools** / **Account Settings**, select the **Server Settings** under the mailbox. Click the **Advanced** button, then in the **Maximum number of server connections to cache**, reduce the set value to 1, and then click OK.
