

How to Set Up Email on iPhone and iPad

LOG IN TO THE CPANEL INTERFACE AND CREATE THE MAILBOX YOU WANT TO SET UP

1. Use your device to log in to the cPanel interface.
2. Create a mailbox! ([How to create E-mailbox in cPanel?](#))

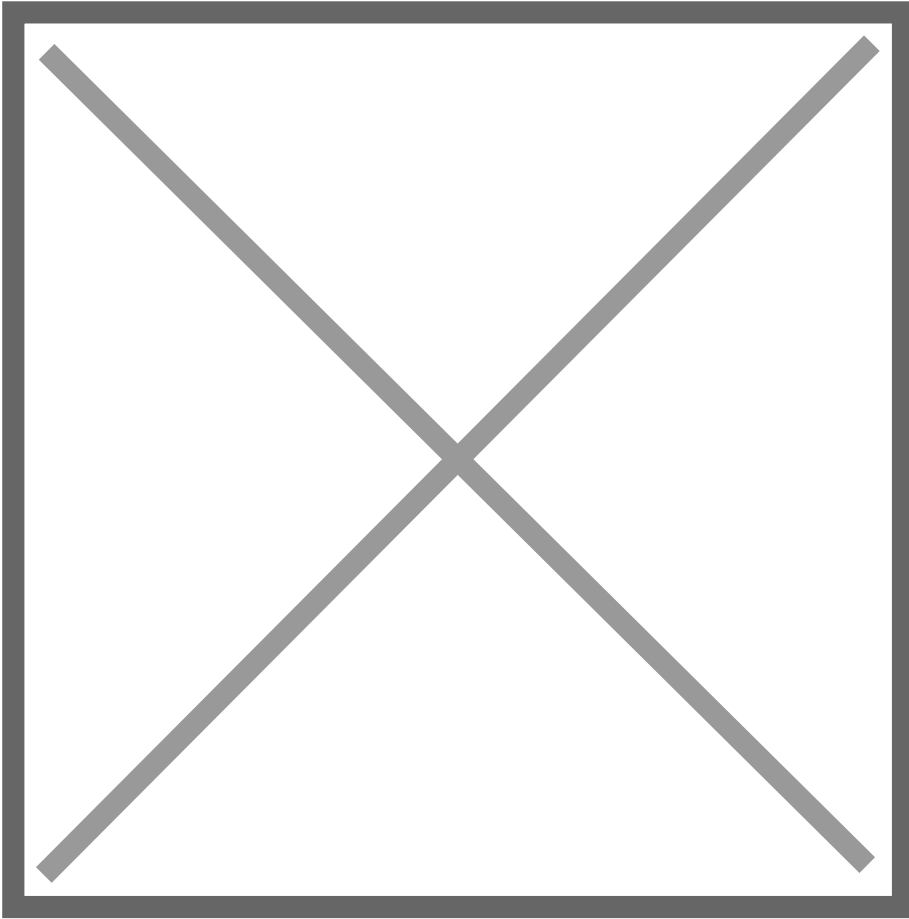

DOWNLOAD PROFILE TO YOUR DEVICE

1. After you have created the mailbox in the cPanel interface, scroll down to the Email accounts section in the Mailbox under Email accounts and click on Connect Tools.
Connect Devices
Connect Devices
2. Tap the IMAP SSL/TLS link to download the profile with configuration settings.
IMAP over SSL/TLS
IMAP over SSL/TLS
3. The interface will display the following message, approve it:
Set Up Mail Client
Set Up Mail Client

SETUP PROCEDURE

The setup is similar for iPhone and iPad. To set up, follow the steps below:

- Approve the warning message that appears to download the profile to your device.
- Navigate to the **Settings** menu, where you tap **Profile downloaded** under your Apple profile.
- The device will then load the data in the saved configuration file and display it, tap **Install** here.
- Then tap the **Install** button at the bottom.
- Enter the password for the mailbox you want to set up, then tap **Next** in the top right corner.
- Finally, tap **Done**.
