Using FTP with WinSCP

The data given in the picture is an illustration! You can find your actual settings in the administration interface!

WinSCP is a free, open source FTP/SFTP/SCP client, with support for multiple encryption schemes.

- After starting the application, click „Session"
- Choose FTP as your file protocol

Enter your login data:

- **Host name:** hostingID.loginssl.com
- **User name:** the FTP user name created or the hostingID
- **Password:** enter your password
