

# M-DSOA -E- [domain] SOA records differ on servers

## THE PROBLEM EXPLANATION:

This means the nameservers not synchronized currently.

## SOLUTION OF THIS PROBLEM:

If the different cause the secondary name server don't download the zone, then fix the configuration.

A couple of possible point:

- firewall rules
- allow-transfer option
- Setup the correct IP address

If the excursion causes the refresh late, ask the provider to synchronize the zone manually.
